(54) PTP PACKAGING BODY

(57) Abstract:

PROBLEM TO BE SOLVED: To facilitate separation of sheet strips at the time of taking medicine by disposing a first and second sheet strip arrangements consisting of aligning and connecting at distances a plurality of sheet strips in parallel at one side and/or another side in the longitudinal direction of a retaining plate in a PTP packaging body used for a package of medicine.

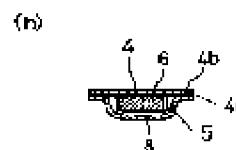

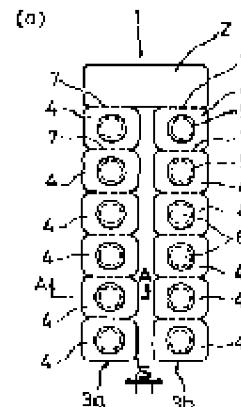

SOLUTION: The PTP sheet 1 is formed of a substantially rectangular retaining plate 2, a bank of sheet strips 3a being joined to one side in the longitudinal direction of the retaining plate 2, having a plurality of sheet pieces 4 connected and aligned in the direction intersecting with the longitudinal direction of the retaining plate 2, and being a free end in the other end, and a bank of sheet pieces 3b being arranged in parallel at a predetermined distance S with the bank of sheet pieces 3a to be connected to one side of the retaining plate 2 in one end, and being a free end in the other end. Each bank of sheet pieces 3a, 3b is that a plurality of sheet pieces 4 are connected in a row in the direction intersecting with the longitudinal direction of the retaining plate 2, and perforation lines 7 are
